

According to preliminary statistics published today by the World Wind Energy Association, global wind power capacity has now reached 1"173"581 Megawatt - well below the ...

This dataset contains yearly electricity generation, capacity, emissions, imports and demand data for European countries. You can find more about Ember's methodology in this document.

The U.S. Department of Energy today released three reports showing record growth in land-based wind energy, significant expansion of the pipeline for offshore wind projects, and continued decline in the ...

The most critical areas for improvement to boost wind electricity generation are cost reductions and technology improvements for offshore wind and facilitating permits for onshore wind (Bojek and ...

About this data Share of electricity generated by wind power Measured as a percentage of total electricity produced in the country or region.

Wind power production has increased by a hundredfold during the last 20 years and represents roughly 3% of the total global electricity production. In recent years, technological ...

It includes wind farm phases with capacities of 10 megawatts (MW) or more. A wind project phase is generally defined as a group of one or more wind turbines that are installed under one permit, one ...

Swedish company Vattenfall estimates the costs of building an offshore wind farm have increased by up to 40% this year, making a planned 140-turbine offshore wind development in the ...

Global wind additions reached a record 117 GW in 2023. 7 In 2024, onshore installations surpassed 100 GW for the second consecutive year, while the U.S. experienced a slowdown. Offshore additions ...

The U.S. Department of Energy today released three reports showing record growth in land-based wind energy, significant expansion of the pipeline for offshore wind projects, and ...
