

How to implement peak shaving?

A11: To implement peak shaving, businesses and utilities can use various techniques such as load shifting, energy storage, and demand response. Load shifting involves rescheduling energy-intensive operations to off-peak hours, while energy storage systems store excess energy during low demand periods and release it during peak demand times.

What is base peak shaving?

Base Peak shaving, sometimes called load shedding, involves reducing the peak electricity demand to lower demand charges. This technique is often employed by commercial and industrial electricity consumers who aim to momentarily reduce their grid-power consumption to help avoid spikes in their energy usage.
