

The abundance of sunshine, along with growing capacity, contributed to the unusually high output of solar power. After stagnating for several years, installed solar capacity in the UK had ...

Solar power generation in Britain so far this year has surpassed the total for 2024 as panels are rapidly installed amid favourable weather, underlining renewable energy's increasing...

Record-breaking sunshine pushes British solar to new heights. Solar power in Great Britain had a record-breaking start to 2025, with solar up 32%, to produce a record 9.91 TWh, ...

At the end of November 2025, at least 38% of capacity (8.2 GW) came from ground-mounted or standalone solar installations. This includes 19 operational solar farms accredited on Contracts for ...

In 2025, wind, solar, hydro and biomass generated more than 127 terawatt hours (TWh) of electricity in Great Britain, according to BBC analysis of provisional Neso data.

Great Britain has achieved a significant milestone in its transition to a zero-carbon electricity system, with solar power generation reaching an all-time high of 12.569 gigawatts (GW) on 1 April, according ...

More than half of UK electricity generation came from renewables in 2024, a first for annual production in a year which saw solar output hit record highs.

Solar power generation in the UK has already surpassed 2024's total output, up 33% year-on-year, enough to supply 5.2m homes for a year. Capacity has risen 20% since 2023, with ...

The highest UK solar output on record was reached at 13:00 on 6 April, when the technology was delivering 13.2GW of power and meeting 40% of demand for that half-hour period.

Find the most up-to-date statistics about solar photovoltaic energy in the United Kingdom (UK)
