

In Burkina Faso, for the past three years, the Burkinabe government has intensified efforts to tackle a critical challenge: ensuring equitable and sustainable access to electricity, ...

For 2020, the Government is targeting an installed capacity of 1,000 MW, of which 50% will be renewable energy, with the participation of private operators through public-private partnerships ...

The population has grown significantly, increasing pressure on energy resources. We aim to bring clean, affordable electricity to more people across Burkina Faso through sustainable development and ...

Notre mission principale est d'assurer une r gulation ind pendante et rigoureuse du secteur de l' nergie, dans le respect des lois et des int r ts de toutes les parties prenantes.

We study the effects of Burkina Faso's large scale electricity grid expansion 2008-2017, using both community and household-level data. We show that the timing of electrification was driven ...

Burkina Faso's journey towards a reliable and sustainable electrical grid is undoubtedly a complex one. But the aggressive planning, coupled with increasing investment and a growing ...

Burkina Faso is one of the least electrified countries globally, currently at 19% overall, with 60% of the urban and only 3% of the rural population connected to electricity. Access to non-solid fuels is also ...

Access to energy is a major challenge in Burkina Faso, with only 22.5% of the population benefiting from electricity, particularly in rural areas. This highlights the need to develop innovative solutions to ...

Burkina Faso is suffering the consequences of a high energy dependence, with 60% of electricity imported in 2022 and production dominated by fossil fuels (86% in 2022).

Unlike other energy commodities such as coal, oil and natural gas, electricity trade between countries is relatively limited as it is more technically complex and requires a direct cross-border interconnection.
