

Solar power in China China's solar potential Wind and solar surpassed a quarter of China's electricity generation for the first time in April 2025.

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn

China power statistics - April 2025 In the first fourth months of the year, wind and solar power generation capacity accounted for 89% of new capacity (see Figure 1 below). Solar continued to show significant ...

China's solar generating capacity is expected to surpass coal for the first time this year, according to the country's top electricity industry group, marking a milestone in the country's ...

China leads global utility-scale solar capacity for projects in announced, pre-construction, and construction phases. According to Global Energy Monitor's Global Solar Power Tracker, China has ...

Renewables now contribute approximately 60 percent of total national generation capacity, with solar and wind leading this transformation across China's solar energy market.

The blog explores how Chinese dominance in smart grids and solar energy creates risks and opportunities for businesses in the global energy market, and how they can navigate this industry's ...

OverviewHistorySolar resourcesSolar photovoltaicsConcentrated solar powerSolar water heatingEffects on the global solar power industryGovernment incentivesChina is the largest market in the world for both photovoltaics (PV) and solar thermal energy. Its PV capacity crossed 1,000 gigawatt (one terawatt, 1 TW) in May 2025. By June 2025, China's PV capacity surpassed 1,100 gigawatt. In 2024, China added 277 gigawatts (GW) of solar power, which was equivalent to 15% of the world's total cumulative installed solar capacity.

The conversion efficiency of photovoltaic cells with different technology routes, for example, has been continuously improved, making solar power generation more stable and efficient, ...

A strong growth in solar power is projected to drive the expansion of China's renewable energy generation capacity in 2026, even as average wind power utilization hours decrease slightly ...

It summarizes the spatial potential and projected capacity trajectories under carbon neutrality goals, with estimates suggesting a combined capacity of 5,496 to 7,662 GW of wind and solar power by 2060, ...
