

As the Czech Republic accelerates its shift toward renewable energy, wind power storage projects are emerging as critical infrastructure. This article explores how cutting-edge storage technologies are ...

A country known for medieval castles and world-class beer is now making headlines as Europe's rising star in electric energy storage. With EUR279 million EU funding pouring into its grid ...

The largest battery system in the Czech Republic has been launched. With a capacity of 10 MW, the battery is more than 30% larger than the current market leader. It can absorb energy to ...

With rising energy costs and increasing attention to sustainable development, a large Czech metal processing plant decided to optimize its energy management system to achieve energy ...

The European Commission has given the go-ahead to a scheme in the Czech Republic that will support 1.5GWh of energy storage projects.

A Containerized Energy Storage System (CESS) is essentially a large-scale battery storage solution housed within a transportable container. Designed to be modular and mobile, these ...

In early 2025, the Czech Parliament approved new legislation enabling stand-alone battery storage systems to be connected directly to the grid - something that was not previously ...

The new project, to be managed through the advanced energy management application "Powerkonnect", involves a complex storage system equipped with LG Energy Solution batteries with ...

The storage system will support the transformation of the Czech power sector and contribute to the stabilisation of the power grid by providing power balance services. "Europe's energy sector is ...

Whether for short-term emergency power needs or long-duration energy storage and release scenarios, the system adapts perfectly. With an energy round-trip efficiency (RTE) exceeding ...
