

Using a geology-based assessment methodology, the U.S. Geological Survey estimated undiscovered, technically recoverable mean conventional resources of 208 million barrels of oil and ...

EGS adapt and use technologies and processes originally developed for the oil and gas industry to access more and deeper geothermal energy resources. This can enable greater ...

The Greening the Islands (GTI) Foundation's flagship programme - the 100% RES Islands Initiative - is at the forefront, underscoring the vital role of advanced storage in achieving ...

CST-GeoTES systems will play a critical role in decarbonizing fossil-dependent industries and decarbonizing power generation. The National Renewable Energy Laboratory (NREL) has developed ...

Having discovered and appraised Sea Lion 100% as Operator in 2010 and 2011, we are a proud long-term partner of the Falklands and our aim has always been to support the rights of the Falkland ...

Approximately 80% of U.S. energy and 40% of its water come from below ground. Drawing on nearly 50 years of subsurface expertise, Berkeley ...

A new project led by NREL aims to address the increasing need for renewable energy storage technologies with long-duration capabilities by evaluating the feasibility of seasonal energy storage in ...

This paper seeks to contribute to this very important issue by appraising the ability of full-scale implementation of RES combined with energy storage in an island power system.

Innovations such as better energy storage solutions and more efficient photovoltaic cells are making island solar power systems even more viable. These technological improvements ...

In this Review, we discuss the development of EGS and its role in providing energy. Some EGS are operating commercially in Europe and provide heat and/or electricity, but technical issues and...

The purpose of this paper is to comprehensively review existing literature on electricity storage in island systems, documenting relevant storage applications worldwide and emphasizing ...
