

At present, the generation from both Gidagom and Thimphu MHPP is synchronized and injected into the national grid. In the last few decades, we have witnessed unprecedented growth in the capital city ...

Our solution modules address the problems related to grid stability with AI-driven technologies put in place. For example, the Flexibility Orchestrator modules for grid operators provide grid analytics, ...

Powerside provides the solutions and expertise to help grid operators take on today's energy challenges. Improve energy efficiency. Support grid stability.

The power generated from these micro power plants is synchronized and injected into the grid. Some of the villages of Trongsa (Korphu, Nimshong, and Nabji) is also fed from a 33 kV Zhemgang feeder ...

The newsletter explores the challenges and technological solutions needed to ensure grid stability and the investments required for resilient grid infrastructure.

In this paper, efforts have been made to assess the future energy potential from the rooftop solar photovoltaic (PV) systems in Thimphu City. For this study, we designed and simulated a ...

Physical inertia from a rotating synchronous condenser delivers exactly the amount of inertia needed to counteract any frequency variation, purely electromechanically, without the need for the control ...

This technical paper focuses on innovative solutions for grid stabilization in the context of increasing renewable energy integration. It examines the challenges posed by variable energy ...

Learn how energy storage systems contribute to grid stabilization and the benefits they provide to the energy infrastructure.

This paper emphasizes on permanent ground stabilization approach through the application of the Soil Nailed Shotcrete wall along a critical stretch of Phuentsholing-Thimphu National Highway.
