

In this study, TiO_2 - SiO_2 based complex thin film were fabricated on PV glass and the transmittance, self-cleaning, and environmental tolerance performances were investigated.

Discover the RB-250 high-transmittance reinforced film, designed to enhance solar cell efficiency with superior light transmission and durability. Perfect for traditional solar panels, BIPV, ...

One year's data shows that the photovoltaic power generation increased by more than 6.4% with the array using white solar reflective film.

Flexible and transparent thin-film silicon solar cells were fabricated and optimized for building-integrated photovoltaics and bifacial operation.

High Transmittance EVA Encapsulation Film is pivotal in ensuring the efficiency and protection of solar panels by allowing high levels of light to pass while safeguarding photovoltaic cells against ...

Through heat insulation solar glass (HISG) encapsulation technology, this study improved the structure of a typical semitransparent PV module and explored the use of three types of high-reflectivity heat ...

Semi-transparent photovoltaics (STPVs) are a promising form of building-integrated photovoltaics for urban green energy generation. By modulating visible light absorption, STPVs can ...

Herein, a bioinspired cellulose-based ultra-slippery film (BCUSF) with an extremely low water sliding angle ($\text{SA} = 0.4^\circ$) and high transmittance ($>95\%$ of bare glass) is reported.

PF245-MARC has excellent potential for outdoor solar cell applications, as it combines high light transmittance, self-cleaning performance, and environmental durability.

TDK has developed a new Ag-Stacked film, on which a thin transparent conductive Ag alloy layer is deposited on a film substrate. It has achieved lower resistance and excellent flexibility, while ...
