

Home installation of photovoltaic panels for own use

How to install solar panels?

The first step in solar panel installation is fixing the mounting structure to support the panels. The whole mounting structure must be tilted and have an angle between 15 to 20 degrees to have maximum sunlight exposure. For countries in the Northern Hemisphere, the best direction to face solar panels is south because it gets maximum sunlight.

Should you install solar panels yourself?

Installing solar panels yourself can save you thousands of dollars while giving you more control over your renewable energy system. You can easily set up a DIY solar system if you're comfortable with basic construction, running power tools, and electrical wiring.

How do I finance a solar panel installation?

There are several ways to finance a solar panel installation, including a cash purchase, a solar loan, or a solar lease. A cash purchase or loan means you own the system and are eligible for incentives like the federal solar tax credit.

How do I choose a solar panel manufacturer?

Choose Solar Panel Supplier: Select a reputable Solar Panel Manufacturing Company to supply and install your solar panels. Consider factors such as the variety of solar panel models available, cost, warranty options, and customization for your specific needs.
