

Honda lithium battery energy storage technology research

The project involves the introduction of a large-scale solar power generation system that utilizes Japan's largest industrial storage battery, and was recognized for establishing a new method ...

Building on initial research milestones, Honda now aims to enhance battery performance further and accelerate testing toward commercialization.

“Fluoride-ion batteries offer a promising new battery chemistry with up to ten times more energy density than currently available Lithium batteries,” said Dr. Christopher Brooks, Chief...

Based on our initial achievements, we will move on to the research process to further advance battery performance, which will be accelerated with the aim to apply our all-solid-state batteries to models ...

January 13, 2023 - LG Energy Solution (LGES; KRX: 373220) and Honda Motor Co., Ltd. (Honda) today announced the formal establishment of the joint venture (JV) which will produce lithium-ion batteries for ...

To expedite development, Honda is conducting intensive research in two key areas: material specifications and manufacturing techniques. The company believes its cutting-edge battery...

The applications of lithium-ion batteries (LIBs) have been widespread including electric vehicles (EVs) and hybridelectric vehicles (HEVs) because of their lucrative ...

To address the energy-environment dilemma, we developed self-standing composite electrodes for Li-ion batteries without electrochemically inactive metal current collectors, additives, and binders, increasing ...

Now, the long-awaited breakthrough may be within reach. Honda plans to utilize its solid-state batteries not only in electric vehicles but also across a wide range of its mobility products, ...

Building on its legacy of technological innovation in areas like solar and hydrogen fuel cells, Honda is accelerating its research into material specifications and production methodologies for ...
