

How to place solar panels in four seasons

Where should I put my solar panels?

The place you install your solar panels matters. Here are the most common places to put your panels, and areas to avoid. Rooftops are the most common places you'll see solar panels, but you have other options too. Installing solar panels can be a great leap toward electricity cost savings and energy efficiency.

How do I choose the best solar panel placement?

Achieving optimal solar panel placement involves: Assessing your roof's structural integrity and capacity. Determining the ideal tilt angle based on your location. Minimizing shading through strategic tree trimming or panel placement. Regular maintenance to keep panels clean and efficient.

When should a solar panel be positioned?

I always recommend identifying obstruction-free areas, especially during peak sunlight hours, typically between 10 AM and 4 PM. The orientation of solar panels affects their efficiency. In the Northern Hemisphere, a south-facing direction usually captures the most sunlight.

Where do solar panels go?

Rooftops are the most common places you'll see solar panels, but you have other options too. Installing solar panels can be a great leap toward electricity cost savings and energy efficiency. But the road to making it happen can be long and tricky. One problem you'll likely encounter: Just where will these panels go?
