

Panasonic has officially announced the upcoming launch of its next-generation HIT[®] N330 solar panels, set to hit the market in 2026. The headline feature is a staggering 33% module ...

Solar power generation systems were set for activation at 13 global Panasonic Industry sites in FY2024, utilizing renewable energy to contribute to achieving net-zero CO₂ emissions for ...

The Sunshine Project (1973-1992) explored the potential of solar power, geothermal power, liquefied coal, and hydrogen as primary energy sources. In 1992, during the early years of commercial PV ...

The Power Supply Station--Panasonic's stand-alone power generation package that uses solar panels and storage batteries--is providing power to Southeast Asian regions where the electricity ...

In this initiative, 9,461 solar panels were installed mainly on the rooftops of air conditioner factories to activate the solar power generation system, which visualizes the amount of electricity ...

Panasonic has begun pilot projects in the Tokyo metropolitan area to test a new energy management system (EMS) designed to increase residential solar self-consumption.

By improving perovskite layer materials, Panasonic aims to achieve high efficiency comparable to that of crystalline silicon solar cells and establish technologies for practical application ...

Demonstration projects are currently underway in Shiga Prefecture (Japan), the UK, and Germany. Both Sharp and Panasonic are also accelerating the development of next-generation solar ...

Japanese electronics manufacturer Panasonic announced it is currently testing a new energy management system (EMS) that helps increase residential PV self-consumption by ...

The company has already entered into off-site corporate PPAs for solar power generation and onshore wind power generation. The PPA with Kyuden will be the first for geothermal power ...
