

To alleviate the communication burden and prevent communication redundancy and transmission congestion in microgrids, event-triggered communication mechanisms are employed in ...

These challenges highlight the strength of our adaptive dynamic event-triggered control (ADETC) system, which adjusts triggering thresholds in real time to ensure system stability and ...

As an important part of modern power system, microgrid has received more and more attention because of its flexibility, stability and independent operation. For

This paper mainly proposes a novel distributed secondary event-triggering control strategy for AC islanded microgrid, which not only achieves the consistency of frequency and voltage but also ...

This paper designs a ratio consistency algorithm based on event triggering mechanism aiming at the frequency recovery deviation caused by traditional droop control in microgrid.

Thus, this paper proposes an event-triggered distributed control strategy that can significantly reduce the requirements of communication.

In order to improve the stability of event triggered off grid microgrids, a frequency coordination control method for event triggered off grid microgrids based
