

New analysis warns that large lithium battery storage sites in populated areas could pose major fire, health, and environmental risks.

A battery storage system in Moss Landing, California caught fire in January, sending plumes of toxic smoke into the atmosphere and forcing the evacuation of about 1,500 people..

Two Tesla Megapacks caught fire this week at a massive 360 MW battery project in Boulder City, near Las Vegas, Nevada. In 2021, Tesla and Arevon signed a deal for the former to ...

A report released Friday by a clean-energy trade group spells out best practices for safe use of large-scale battery energy storage systems following a major fire at a battery facility early...

This recent fire highlights not only the immediate environmental effects but also the long-term implications for the role of lithium-ion technology in renewable energy.

More battery energy storage facilities are needed around the world, but fire risks remain.

Let's catch up on what happened in this fire, what the lingering concerns are, and what comes next for the energy storage industry.

A fire at the world's largest battery storage plant in California destroyed 300 megawatts of energy storage, forced 1200 area residents to evacuate and released smoke plumes that could pose...

About 15 residents, including a Thurston County fire chief, testified anew or reiterated their opposition on Tuesday to a battery energy storage system that has been proposed in south Thurston ...

Lithium-ion batteries are increasingly being used to store power for electrical grids, but some localities are concerned about fire risks.

This recent fire highlights not only the immediate environmental ...
