

This target encompasses both small-scale rooftop installations and large utility-scale solar power plants, though the share between them is undetermined. This article analyses current trends, potential ...

A new research paper has calculated the technical potential of installing solar on building walls and roofs across Norway and the feasibility of integrating the power into the country's grid.

The potential is large, but it will only be unlocked with favourable framework conditions. This article analyses how Norway's regulatory landscape for solar energy is changing rapidly.

But could solar power offer a green alternative? Store Norske Energi, a state-owned energy company based in Longyearbyen, is testing whether solar energy could be used to transition Spitsbergen to emissions-free, ...

Norway's rooftops may hold the key to a greener future. A new study reveals the country's buildings could generate vast amounts of solar power--enough to transform its energy landscape. But the ...

This presentation will cover the latest development of solar PV installations in Norway and the way forward from here. What processes are currently ongoing and what are the key challenges to overcome?

Discover the Nordic grid system's intricacies and seize solar prospects across Norway, Sweden, Denmark, and Finland in this comprehensive guide.

As the country's first land-based solar power plant, Furuseth solar power plant has been authorized to generate electricity equivalent to the consumption of over 300 households, with a total capacity of about 6.4 GWh.

Norway, famed for its stunning landscapes and immense hydropower, has the potential to install 31 GW of solar PV on its buildings. A recent study explores the significant opportunities and complex ...

Norway's strategy aims to integrate solar energy into a diversified renewable portfolio, where it complements the nation's vast wind and hydropower resources. By increasing the share of renewables, ...
