

This project uses artificial intelligence and machine learning techniques to analyze data from a large number of neighboring photovoltaic systems in order to extract information about their short- and ...

The Community Solar Pilot Program is designed to expand access to renewable energy for low-income households that do not have the ability to participate in existing low-income solar photovoltaic (PV) ...

In February, TID announced Project Nexus, a pilot project to install 5 megawatts of solar panel canopies over our existing irrigation canals - the first project of its kind in the nation.

Solar Installed System Cost Analysis NLR analyzes the total costs associated with installing photovoltaic (PV) systems for residential rooftop, commercial rooftop, and utility-scale ...

The project implementation period is 14 months, of which the duration of the works is 10 months. This investment marks a premiere for the company, being the first project to install floating ...

The Beck Hill Microgrid is a pilot project using solar photovoltaic panels and batteries to test the potential of using a small microgrid to improve the reliability of electric service to customers in rural areas.

Project Nexus, the first solar panel canopies over irrigation canals in the US, is now online in California, and there are plans to expand the project to other areas. Project Nexus is a \$20...

This investment marks a first for the company, as it is Hidroelectrica's first floating photovoltaic panel installation project. The project represents an important step in the company's ...

Sun-ways is looking to tap into the estimated 1-TWh annual energy potential from the 5,000-km of railroad tracks in Switzerland by laying removable PV panels between them.

Last December China's state-owned oil company, Sinopec, recapped the results of a modestly scaled floating solar pilot project, aimed at producing green hydrogen from seawater.
