necessary features to supplement the grid power during day time. Components and parts used in the SPV power plants including the PV modules, metallic structures, cables, junction box, switches, PCUs etc., ...

Solar systems are categorized into three types based on their grid connection. They are on-grid solar, off-grid solar, and hybrid systems that combine the two.

The PV modules must be PID compliant, salt, mist & ammonia resistant and should withstand weather conditions for the project life cycle.

Solar PV system sizing will be limited by two factors, the amount of physical space available for the installation and the electricity consumption profile of the building (load profile).
