

Recommendations for explosion-proof fans for energy storage containers

What is a BS&B explosion vent?

Explosion Venting Protection for Battery Energy Storage Systems BS&B manufactures Ven -Saf™ explosion vents for Battery Energy Storage Systems (BESS) to safely move the explosion upward and away from the container. BS&B vents are certified to open at designated burst pressure.

How much vent gas does an ISO container deflagration system produce?

Approximately 28.7 m³, or 99% of the available 28.8 m³ roof area. To bring these figures into perspective, for the 130 Ah capacity cells which produce the average 154 L of vent gas each, 6.9 cells will produce the volume of vent gas that maxes out the capabilities of the 8-ft ISO container deflagration protection system, with the

What if a vent panel is actuated in a deflagration or explosion?

Projectiles can be launched in the event of a deflagration or explosion. The angle of vent panel openings upon actuation also need to be considered, as different angles allow more or less oxygen to enter the enclosure while still retaining the flammable gas and heat within.

What size vents do I need for a 8 ft ISO container?

Results in the vents being placed on the roof of the enclosure. For the 8-ft ISO container, the ceiling size is 5.76 m², and the required vent area to successfully manage 1063 L of vent gas is 5.72 m², or 99%
