

What is solar photovoltaics (PV)?

Solar photovoltaics (PV) is a very modular technology that can be manufactured in large plants, which creates economies of scale, but can also be deployed in very small quantities at a time. This allows for a wide range of applications, from small residential roof-top systems up to utility-scale power generation installations.

Is solar photovoltaic the new cornerstone of the global power sector?

In the past three months, the International Energy Agency, the International Renewable Energy Agency, and BloombergNEF published preliminary data for the power sector in 2024. These data hammer the same powerful message: solar photovoltaic (PV) has become the new cornerstone of the global power sector.

Why is the global solar PV market growing?

The increasing focus on clean electricity through solar PV targets is a major driver of growth in the global solar PV market, as governments worldwide set ambitious renewable energy and decarbonization goals to reduce dependence on fossil fuels and meet climate commitments.

Will global solar PV capacity hit 5400 GW by 2030?

Global solar PV capacity may hit at least 5,400 GW by 2030, the roadmap said in quoting International Renewable Energy Agency (IRENA) data. The China Photovoltaic Industry Association on Thursday released this year's edition of the China PV Industry Development Roadmap.

Find up-to-date statistics and facts on the global solar photovoltaic industry.

WORLDMETRICS REPORT 2026 Solar Pv Industry Statistics Solar power is rapidly expanding worldwide due to falling costs and strong policy support.

The Solar Photovoltaic (PV) Market worth 2.91 terawatt in 2026 is growing at a CAGR of 19.92% to reach 7.23 terawatt by 2031. LONGi Green Energy Technology Co. Ltd., Trina Solar Co. ...

The IEA PVPS Trends in Photovoltaic Applications 2025 report provides comprehensive data and analysis on global PV deployment, technology, and market evolution from 1992 to 2024. It supports ...

The year 2024 was a true landmark year for solar power. Global solar installations reached nearly 600 GW - an impressive 33% increase over the previous year - setting yet another ...

The solar photovoltaic market size crossed USD 323.5 billion in 2025 and is expected to grow at a CAGR of 8.1% from 2026 to 2035, driven by integration of solar PV across agriculture and business ...

Driven by favorable factors such as the continued decline in PV power generation costs and growing demand in emerging markets, global installations of new PV capacity are expected to ...

Through a systematic literature survey, this review study summarizes the world solar energy status (including concentrating solar power and solar PV power) along with the published ...

In the past three months, the International Energy Agency, the International Renewable Energy Agency, and BloombergNEF published preliminary data for the power sector in 2024. These ...

Why is solar PV important? Solar photovoltaics (PV) is a very modular technology that can be manufactured in large plants, which creates economies of scale, but can also be deployed in very ...
