

What is a solar-powered LED billboard lighting system?

SEPCO's commercial solar-powered LED billboard lighting systems provide lighting without the need for standard utility power. Our LED billboard light systems provide cost savings by eliminating the need to trench standard electric wires for installation and providing no electric bill for the system's life.

How many Watts Does a solar Billboard light use?

Solar power assemblies range from 30 Watts to 550 Watts, and battery assemblies are available from 36 Amp-hours to 672-Amp hours. The complete system comes with the controller to operate the LED billboard lights per the specified operation profile set up with the solar specialist during project analysis.

How does SEPCO solar-powered Billboard lighting work?

Every SEPCO solar-powered billboard lighting system comes complete with a self-contained solar power assembly sized to run the specified solar light fixture as per the requirements set by the customer. Our team designs each system by the power consumed by the fixture and available sun provided by the geographical location of installation.

How do led Billboard lights save money?

Our LED billboard light systems provide cost savings by eliminating the need to trench standard electric wires for installation and providing no electric bill for the system's life. SEPCO has helped provide security, sustainability, and an overall green image for many businesses with solar-powered billboard lights, large and small.
