

How does adjusting a solar panel's angle affect energy production?

Adjusting your solar panel's angle impacts your energy collection. For instance, with a system at 40° latitude, see the comparison in the table below to the optimal tracker, which always faces the sun directly. Adjusting the tilt twice a year gives your energy production a solid boost.

Are adjustable solar panel tilt mounts necessary?

Therefore, while helpful for achieving the ideal angle, they aren't essential. Adjustable solar panel tilt mounts come in manual, motorized, and tracking varieties. Single-axis trackers are a popular choice for large solar farms, while dual-axis options suit specialized applications needing high precision or for research.

How do I adjust the angle of my panels?

You can adjust the tilt from 20° to 50°, depending on your panel size, and numerous holes enable seasonal angle changes. With our adjustable triangles, you can adjust the panel angles on-site to avoid shadows and make the most of your space for even more panels. If you're putting them on the ground, you don't need a big foundation.

What angle should a solar panel tilt be?

The season and where you live are important considerations for finding the right angle. Los Angeles, CA, with a latitude around 34 degrees north, suggests a solar panel angle of approximately 34 degrees. For New York City, NY, at about 40.7 degrees north latitude, you might set your tilt angle to around 41 degrees.
