

Solar power generation industry research plan

NLR gathers datasets, conducts analysis, and develops tools to inform adoption of solar energy to benefit industries and communities across the United States.

Prospective utility-scale solar and wind capacity -- projects that have been announced or are in the pre-construction and construction phases -- grew by over 20% globally in 2024 from 3.6 terawatts (TW) ...

Our annual Year in review report includes a 10-year outlook for every segment. We expect cumulative US solar capacity to more than triple from 236 GWdc installed at year-end 2024, ...

Solar Energy: Mapping the Road Ahead aims to provide government, industry, civil society and community stakeholders with the methodology and tools to successfully plan and ...

SPF2050 is catalyzing breakthrough pre-competitive research for the solar power industry by enabling close and sustained engagement between industry innovators, world-class academic teams, and ...

This guide to researching the business of generating and distributing renewable energy focuses on resources related to hydropower, solar, wind, geothermal, and biomass industries as well as the ...

o At the end of 2024, solar was the second-largest source of U.S. generation capacity, though still a growing percentage of the U.S. electric generation mix. o In 2024, solar represented ...

Current, comprehensive coverage of the Solar Power Generation Industry. Includes: industry forecasts, trends, financial information & detailed analysis. Updated 11/24/2025.

Electricity generation by the U.S. electric power sector totaled about 4,260 billion kilowatthours (BkWh) in 2025. In our latest Short-Term Energy Outlook (STEO), we expect U.S. ...

Each presentation focuses on global and U.S. supply and demand, module and system price, investment trends and business models, and updates on U.S. government programs ...
