

[0001] The present invention relates generally to power generation, and particularly to a portable generator for generating electrical energy from wind and solar energy.

Search for Solar Energy Type Patents and Patent Applications (Class 136/206) Filed with the USPTO

To this end, it assesses patenting activities across more than 30 technologies related to photovoltaic materials, photovoltaic devices, the management of these devices and application areas. Find thousands of patent ...

Search and read the full text of patents from around the world with Google Patents, and find prior art in our index of non-patent literature.

Patsnap Eureka AI that helps you search prior art, draft patents, and assess FTO risks, powered by patent and scientific literature data.

The systems have improved efficiencies particularly with respect to early morning and evening power generation that enable improved power densities on a given land area as compared to traditional solar ...

Solar Energy The sun emits solar radiation in the form of light. Solar energy technologies capture this radiation and turn it into useful forms of energy. There are two main types of solar energy ...

The evidence from the publication of patent data supports this finding and suggests that innovation in the renewables sector took off in the decade up to 2012, particularly in solar technologies.

According to Nature Communications, solar power is currently on track to become the world's dominant source of power by 2050. If you're innovating in the solar industry, patents will be a primary tool for ...

The present invention is directed to a solar-powered generator that captures solar energy. This solar-powered generator allows the sun's radiation and light to enter an inner chamber and...
