

Solar cell power is an alternative method of power generation. In this report, the application of a new concentrated photovoltaic technology called a solar sphere is tested experimentally. This technology ...

This generator will combine spherical geometry principles with a dual axis sun tracking system. The glass sphere is used to concentrate diffused sunlight into a small surface of tiny solar panels.

The spherical generator works by using a large transparent sphere to focus sunlight onto a small surface area of mini-solar panels. Efficiency is enhanced because the solar panels used in ...

Unlike conventional flat solar cells, Sphelar's cell takes on a spherical shape, which makes it capable of power generation with greater efficiency. This tiny solar cell, measuring a mere 1-2 mm across, ...

The company claims these spheres could achieve 60 times more energy output than solar panels in natural or artificial light.

A German Architect has designed an innovative form of a solar power generator. Unlike being flat or thin like other PV panels, this one is a giant transparent sphere!

Japanese optoelectronic and semiconductor manufacturer Kyosemi Corporation has developed a solar cell called the Sphelar that could turn any pane of clear glass into a solar energy ...

That's because the business, which has operations in New York City, says its experts have created tiny globes -- from a little more than an inch to nearly 4 inches in size -- that can harness ...

In terms of technology, these spheres, which range in size from just over 2.54 cm to almost 10.16 cm, have the ability to capture both sunlight and artificial light to generate electricity.

Look at the solar power generator in a form of sphere. Read the advantages of this model.
