Can energy-saving superconducting transmission be a promising solution for hyper-scale data centers?

Based on the results and analysis in this article, the energy-saving superconducting transmission scheme connecting the clean energy and data centers can be a promising solution of energy distribution for the future hyper-scale data centers.

How much energy is lost by superconducting compared to conventional AC/DC?

For the 10 kV 10 km case, the total energy loss of superconducting scheme is merely 1.7% of conventional AC scheme. The comparative cost-benefit analysis between superconducting and conventional AC/DC transmission system has been executed with respect to the capital investment costs and operating costs.

Can superconducting cables be used to power a 100 mw data center?

A systematic study with novel analysis/results of power transmission using the energy-saving superconducting cables from the clean energy source to a 100-MW-class data center have been presented, with the references using the conventional AC and DC power transmissions.
