

Located up to 85.5 km offshore from Yancheng City, the Dafeng wind farm is China's farthest grid-connected wind project to date. The site includes 98 turbines and three offshore booster ...

The 800 MW offshore wind farm has been built in the northeastern sea area of Dafeng District, Yancheng City, and consists of four sites, with the farthest site (H8-1) located 85.5 kilometres ...

The project was developed by Huaneng Yancheng Dafeng New Energy Power Generation and is currently owned by Huaneng Power International with a stake of 100%. The wind ...

China's remotest offshore wind project, the 800-megawatt offshore wind farm in Dafeng, Jiangsu Province, completed all wind turbine installations on November 13.

Equipped with 98 turbines and three offshore booster stations, the project is expected to generate over 2.6 billion kWh of electricity per year, enough to power around 1.1 million households ...

It has a total installed capacity of 800 megawatts and features 98 wind turbines. The successful grid connection has validated the feasibility of developing wind power in deep and distant ...

Despite big waves and tough weather, over 1,000 workers pushed through to get the first turbines spinning on 4 July. Once complete by year-end, the wind farm will have 98 turbines and ...

A record-breaking 20-megawatt (MW) offshore wind turbine has been connected to China's grid in the Fujian Province.

The Dafeng Phase II Project in Jiangsu. The wind farm is located outside the waters of Dafeng Port, Jiangsu Province, with its center about 60 kilometers offshore. Totally, 94 sets of 6.45MW large ...

On Dec 20, 2018, the wind turbines of the Dafeng offshore wind farm owned by the State Power Investment Corporation (SPIC) were connected to the grid and officially put into operation.
