

STACK100 is a modular, stackable, plug-and-play system that can be installed in a cluster in just 30 minutes, with no wiring required. On the day of installation, the team completed the commissioning in ...

while you're sipping coconut water on a Phuket beach, Thailand's engineers are busy building floating solar islands and next-gen batteries that could power entire cities.

With ongoing deployment of variable renewable energy technologies, such as solar and wind power, the opportunities for energy storage projects will increase. Long-term plans to liberalise ...

Thailand's 2024 plan increases renewable energy, highlighting crucial battery storage systems for buildings and power generation.

Energy storage is in its infancy in Thailand, and new business models are already emerging. As the regulatory framework adapts to accommodate new players in the market, it is ...

Thailand's latest solar farms aren't complete without DC-coupled storage systems. The 45 MW Lopburi Solar + Storage project uses Tesla Megapacks to shift 30% of daytime production to evening use.

Northern Thailand's energy storage project in Chiang Mai marks a turning point for renewable energy adoption across Southeast Asia. Announced last month, this initiative aims to solve the region's ...

This project aims to serve as an energy storage system to ensure the security of the country's power system and support the transition toward rising renewable energy in the future.

The projects comprise eight solar PV plants and four with integrated battery energy storage systems. The move supports Thailand's goal of achieving 50% renewable energy by 2037.

Thailand may lack the Battery Energy Storage Systems (BESS) necessary to navigate supply and demand challenges. The 2024 PDP draft included 10,000 MW of BESS, but this may see ...
