

Following three years of bombardments and damage to its energy infrastructure, Ukrainian businesses are turning to self-consumption solar PV systems to keep the lights on.

SOLARsk has completed the construction of the first solar power plant in Ukraine built on the domestic HSAT HORIZON STR-111 tracker system. This project marks an important milestone in ...

The IEA estimates Ukraine would need to add around 4 GW of distributed PV per year until 2030 (over 24 GW in total) to create a more decentralised and secure power system and achieve the objectives ...

The USAID-NREL Partnership's original goal in Ukraine was to: (1) provide technical support and data analysis for distribution systems siting and project investment decisions, and (2) ...

Currently, the company is a developer and manufacturer of a full range of single- and double-axis solar trackers of 5 - 140 kW installed capacity. To date, there are more than five hundred trackers of over 7 ...

Solar power plants installed at three water and wastewater utility sites in Chortkiv, Western Ukraine, support uninterrupted water services to residents. It is the first solar energy project ...

The Energy Act for Ukraine Foundation launched 100SolarSchools and 50SolarHospitals campaigns to install hybrid solar plants across critical infrastructure. Ecoclub's Solar Aid For Ukraine ...

Critical shortages are driving demand in Ukraine for decentralised energy generation and system resilience, but rollout is currently too slow-paced for Ukraine's National Energy and Climate Plan ...

Ukraine is actively implementing Smart Grid technology, which will become the basis for safe, efficient and stable operation of the power system in the face of modern challenges.

In 2019, changes were announced to the Ukrainian energy market operations that have significant impacts on the growth and operation of large scale solar facilities in Ukraine.
