

Waterproof customized pv distributions for island use

Is floating PV a good energy supply option for Islands and coastal areas?

Therefore, floating PV is a very effective electricity supply option for islands and coastal areas in the Sun Belt, as the technology combines low cost, high electricity yield and low area demand.

Should offshore floating PV be considered in future island studies?

Offshore floating PV is therefore strongly recommended to be considered in future island studies, as well as when studying countries with limited land area and available sea waters; Wave power will also be very important, even if the wave resources are moderate.
