

What began as a village once mired in debt is now a model for rural vitalization -- turning sunlight into sustainable prosperity. Workers deploy solar panels at the village.

In the past 17 months, 27 families installed solar panels capable of supplying power to 82 households. Trials for the panels progressed smoothly, and next month a new micro power network ...

The company had the land filled in and leveled and then built a photovoltaic power station there. Rows of solar panels were installed, and beneath them villagers grow crops and raise livestock.

Originally a typical sandy plain settlement, it is transforming into a "low-carbon countryside" thanks to photovoltaic power generation. The village has built photovoltaic panels over ...

The Solar powered village will have over 1000 solar panels, that have been installed on the village houses, generating electricity round the clock for the villagers to provide ...

In order to make better use of solar power, the village is transforming barren lands into photovoltaic facilities. A 173-meter-long photovoltaic corridor has been constructed in a large ...

Inside China's solar villages For a decade, solar power has been bringing opportunities to China's villages. What does that mean today? China's rural "solar villages" show how distributed ...

Rooftop photovoltaic panels are pictured at Meilin Village in Xiaoshan District of Hangzhou, east China's Zhejiang Province, on Aug. 4, 2025. Meilin, which has long been a model ...
