

This review discusses the latest progress in sustainable long-term energy storage, especially the development of redox slurry electrodes and their significant effects on the performance ...

In this review, we will provide a detailed introduction and discussion on the development of zinc-based flow battery systems from the perspective of engineering aspects.

In this perspective, we first review the development of battery components, cell stacks, and demonstration systems for zinc-based flow battery technologies from the perspectives of both ...

Aqueous Zn-I flow batteries are attractive for grid storage owing to their inherent safety, high energy density, and cost-effectiveness.

Zinc-based flow battery technologies are regarded as a promising solution for distributed energy storage. Nevertheless, their upscaling for practical applications is still confronted with ...

This study breaks the solid-liquid working mode of the Zn anode, offering an effective solution for LDES applications with Zn-FBs. A liquid metal electrode enables dendrite-free, zinc-based flow batteries ...

Herein, a zinc-air flow battery (ZAFB) as an environmentally friendly and inexpensive energy storage system is investigated. For this purpose, an optimized ZAFB for households is ...

Here, the authors extended the concept of biphasic self-stratified batteries to non-aqueous systems, resulting in increased energy density and output voltage.

Recently, aqueous zinc-iron redox flow batteries have received great interest due to their eco-friendliness, cost-effectiveness, non-toxicity, and abundance.

To reduce battery fabrication costs, we propose a minimal-design stirred battery with a gravity-driven self-stratified architecture that contains a zinc anode at the bottom, an aqueous ...
